

## Technical Water Quality Team

A copy of the water quality and contaminants subprogram of the Ecosystem Restoration Project Plan is attached for your review. As you may be aware, the ERPP is under development in the form of three volumes of information. Volume I contains the Visions for Ecosystem Elements, Volume II contains the Visions for Ecological Zones and Volume III contains Visions for Adaptive Management, Indicators of Ecological Health, Monitoring, Focused Research and Phased Implementation.

The monitoring plan in Volume III is made up of numerous subcomponents pertinent to ecosystem restoration activities. Two of the components are water quality and contaminants. All the components are described at a very general programmatic level. Further development of the subcomponents will take place utilizing the expertise of technical groups such as yours. Please note that this monitoring program is specific to the ERPP but may be used as a core to develop a larger monitoring program for the overall CMARP.

We look forward to receiving your comments and future coordination with your team..
